

Arduino Code:

```
#include "HX711.h"

#define DT 2
#define SCK 3

HX711 scale;

void setup() {
  Serial.begin(9600);
  scale.begin(DT, SCK);
}
void loop() {

  long rawValue = scale.read();
  float weight = rawValue / 420.0;

  Serial.print("Weight: ");
  Serial.print(weight);
  Serial.println(" kg");
  if(weight < 10) {
    Serial.println("LOW MATERIAL ALERT");
  }
  else if(weight > 40) {
    Serial.println("OVERLOAD ALERT");
  }
  else {
    Serial.println("NORMAL LOAD");
  }
  Serial.println("-----");
  delay(1000);
}
```
